since 1997

About myself

In the course of my career I have noticed that most companies do not actively review their corporate insurances to keep in pace with the changes in business direction, environment and trend, The reality is that whilst most companies have protection against loss of physical assets, they are highly exposed to liability risk. Other areas of concern include changes in corporate governance & legislation, higher legal fees, increased fraud & production contamination, default on financing & personal guarantor, business succession etc...

Whilst companies specialize in their business, it is imperative and necessary for them to engage specialized brokers to evaluate their corporate risk from time to time. My business philosophy is to provide companies with relevant solutions to immunize their businesses against all identifiable risks.

I am strongly committed to providing quality service especially in pursuing legitimate claim settlement on behalf of clients, avoiding delayed claim settlement that may jeopardize their cash flow unnecessary.

As a qualified Certified Financial Planner, I am also in the position to value-add to employees as well. My greatest satisfaction arises from being able to offer my services both to the organization as well as individuals within the organization. After all, human resources are the companies' most valuable assets.
